## Fixed LadderLink

SafetyLink's® Fixed LadderLink is a permanent bracket designed to stabilise your ladder. The Fixed LadderLink has securing points to tie off the ladder providing a safe access point, eliminating sideways movement. Easy to install, unobtrusive.

Material such as stainless steel when used without a protective membrane have a high corrosive effect on roof sheeting, this exposure when put in direct contact with roof sheeting will dramatically reduce the life expectancy of the sheet due to premature corrosion. SafetyLinks Fixed LadderLink has been manufactured from marine grade aluminium, this metal choice not only ensures a durable light weight product for installation, it also has the added advantage of being a compatible metal, with the LadderLink's large surface area this is certainly an added advantage. SafetyLink have finished this product off with a protective membrane in the form of a powder coat finish, this ensures your product is ready for any additional colouring you would like to apply.
